PO Box C
Laramie, WY 82073

Dear Darren,

I am writing to you in regards to our proposed easement for a 34.5 sub-transmission line to tie our Monolith delivery point to our existing 34.5 sub-transmission system that feeds the eastern portion of our service territory. In exchange for granting an easement for the sub-transmission line Carbon Power and Light will install an underground primary line ending with a pad-mount transformer and a 200 amp meter pedestal. The service will be located at the northeast corner of the barn as we discussed at our meeting on August 15th. In order to install the line, CP&L will need a trench provided and an easement granted for that line as well. The line that Carbon is providing would cost approximately \$7,850 if we were to charge for the labor and materials.

Please let me know if you have any questions or need any additional information.

Sincerely,

Jim Beckmann
Director of Engineering Services
